

Cleaning your Mouse

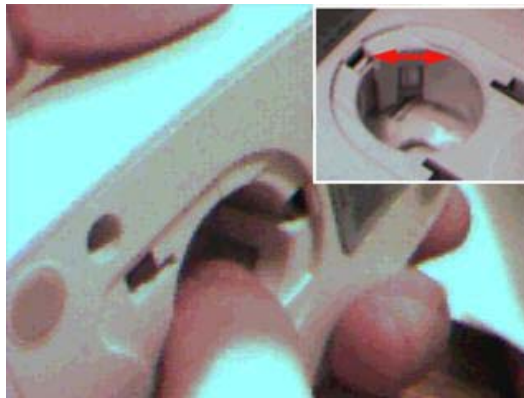

1. Turn your mouse over and find the cover that holds the mouse's rubber ball in place. Words or arrows should show the direction that you can slide or twist the cover to remove it.

2. Keep your fingers in place on the cover and turn the mouse until gravity lets the ball and cover fall into your hand. Wipe or blow away any specs of lint as you inspect the cover and ball. You may use the cover as a stand to set the ball down so it doesn't roll away.

3. On the underside of the mouse, notice the three rollers spaced equally apart inside. Use your finger nail or an alcohol pad to remove the lint build up on the center of each roller

4. Scrape in a side-to-side motion across the build-up while slowly turning the roller until all lint is removed. Repeat for all three rollers.

Two of the rollers are held in place solidly while the third pushes back on a spring. This will be the hardest one to scrape, but it will come clean with persistence.

The last thing you need to do is put the mouse back together.

Be very sure that everything is **VERY** dry before you put the mouse back together and use it.

Shake out any loose lint clumps that may have fallen inside. Wipe off any lint from the ball and put it back in place. Then just return the plastic cover and enjoy your mouse's new found dexterity!
